TERMINAL SPACESAVER®

The Terminal Spacesaver is the perfect solution for the problems created by remote keyboard terminals. Small enough to mount comfortably on a 15" CRT station or table, it also provides protection for the keyboard when not in use.

The tray slides out easily and locks into place to provide a secure working position. When finished the tray closes with a simple push.

The optional swivel base allows additional operators to use the same terminal. The swivel base is mounted on non-skid and non-marking bumpers to protect furniture.

Without the swivel base, the Spacesaver can be placed on any surface or table. The $12\frac{7}{8}$ " deep tray allows user access in areas of little room, that previously was wasted space.

The Terminal Spacesaver is made of sturdy all-steel construction and comes with a textured off-white finish.

NOTE: Please order by model number:

TSS1 — Spacesaver without swivel base.

TSS2 — Spacesaver with swivel base.

TERMINAL SPACESAVER IS A TRADEMARK OF ATLAS METAL INDUSTRIES, INC.

Atlas has built a reputation over the last 36 years for expertise in all forms of metal fabrication. For more information please contact our factory.
